Why do people explore space?

Joe Marino/UPI/Shutterstock

In the news this week

Scientists at NASA are preparing to send astronauts back to the Moon, as part of a new space programme running over the coming years. The series of missions aims to test new technology, learn more about the Moon, and help humans prepare for future journeys deeper into space. The next mission is Artemis II. The plans have sparked discussions about why people explore space and how they could help life on Earth.

Things to talk about at home ...

- > What do you already know about space or the Moon? What would you like to find out?
- > Why do you believe people choose to explore space, even though it can be difficult and risky?
- > If you could explore anywhere beyond Earth, where would you go and why?
